

# Cloud BI Platform for Healthcare Applications

Unify analytics across healthcare operations and empower your users with cloud-enabled mobile BI. IntellicusCloudBI is the quickest and most modern way for on-premise and desktop healthcare applications to deliver insights to their users on mobile. Deliver seamless information workflows across on-premise and field users.

With their staff equipped with insights across all departments, healthcare institutions can elevate their operational efficiency, improve patient experience and eliminate risks.

## Referral and Care Workflows

Physicians can access real-time updates on referral status. Analyze trends on patient count to plan resource allocation and scheduling. Keep your staff up to date on their mobile devices with real-time updates on their scheduled and ad hoc assignments. Build a full cycle workflow by pushing field acknowledgements and inputs to on-premise applications via cloud.

## Enhance Patient Care

Derive intelligence to manage admissions, streamline operations, optimize costs, and build better patient experience across the complete patient cycle. Refer performance dashboards, visualize real-time information on patient activities and keep medical consultants regularly notified on patient care information, drug administration, their test results and other activities through mobile application. Unify data insights for various departments to eliminate redundancies and decrease time consumed in manual processes.

Get predictions on at-risk patients and their likelihood to be readmitted. With such insights take actions to lower readmission rates and improve patient satisfaction.

## Enhance Home Care Services

Provide your staff access to real-time insights on home care appointments, cancellations, prescriptive medicines, and other procedural information. Plan on-field activities based on these insights to ensure your adherence to timelines is always matched and take actions to derive better patient satisfaction rates. Bring out predictions on staff requirements and other parameters to respond to house calls timely. Get real-time status of on-field staff and assess their key KPIs instantly through mobile. Bring out predictive insights to ensure optimum availability of drugs, and other inventories.

## Optimize Revenue Cycle

Monitor and analyse revenue management cycle with cash inflow and outflow related information available at your fingertips. Get automated alerts on transactions and claims keyed in by on-field staff in real-time. View aggregated trends and insights, drill down to transactional level details in a single dashboard to get complete view of costs and revenue across different operations. Get predictions on future costs vs. revenue for accurate budgeting. Get insights to optimize costs and enable value-based care for patients.

## Automate Insurer Processes

Generate compliant insurance claims reports and automate exchange of patient data to insurance agencies. Get regular updates on pending approvals, status of insurance extension requests, and rejected claims. Get insights on how you can minimize risks of insurance claims getting rejected or withheld. Forecast insurance renewal possibilities so as requests are shared well within defined timelines with insurance companies. Predict probabilities of insurance claims getting rejected against patient, medical procedures, or other factors, and implement corrective measures timely.

## Stay Secure and Compliant

IntellicusCloudBI helps you to mask critical patient information in various reports and make it accessible to only relevant personnel. With security, you can create necessary workflows in IntellicusCloudBI to stay compliant with various government norms. Despite these stringent security measures in place, IntellicusCloudBI provides a seamless analytics experience to your users.

## Adopt Intellicus Cloud BI for 360 Degree View of Your Business

Healthcare organizations excel in their services, who go beyond assumptions and chances. Analysing clinical, staff and finance information in a single powerful system, gives you a 360-degree view of your business. Having a scientific BI process in place takes out the ambiguity and enables informed operations across all levels.
