Intellicus 7.1 with the New Ad-hoc Visualizer – For Un-Paralleled User Experience

India, 17th August 2016: In line with their philosophy of staying ahead of the technology curve of enterprise reporting and business analytics, Intellicus announced the launch of the latest version of its flagship product—Intellicus 7.1.

Multiple enhancements across different functionalities make Intellicus7.1 the most robust and all-encompassing of their offerings so far. But the real show-stopper is the new Ad-Hoc visualizer that has added an all-new dimension to the term, User Experience.

The new Ad-Hoc Visualizer is an intuitive, web-based, self-service tool to visualize and analyze large amounts of data. It helps generate reports by performing desired data operations on-the-fly on datasets from disparate sources. Ad hoc Visualizer enables quick visualizations by initiating implicit sampling and caching of data and can represent data in grid, matrix, map and various forms of charts.

With additional data connectors, a unique concept of extracting data from multiple heterogeneous sources, and enhancements across ad-hoc reporting and dashboards, Intellicus 7.1 offers improved analytics to aid better decisions.

Intellicus 7.1 will be showcased at STRATA conference, to be held in California, USA, from February 12 – 14, 2014.

About Intellicus: Intellicus is one of the world's leading Business Intelligence and Analytics platforms. More than 60% of Fortune 500 companies are using Intellicus to build powerful reports and dashboards with ease. Our interactive web and mobile platforms give users the power to access, view, and interact with corporate data anywhere.
