

Intellicus BI Adds Support for 30 Languages

India, 17th August 2016: Intellicus is a leading provider of Business Intelligence and Enterprise Reporting software, with a significant installed client base in a broad range of sectors, like healthcare, finance, security, SLMS, and technology. Its market share covers more than 60% of the Fortune 500 companies. With this, Intellicus continues to strengthen its offerings and services across the globe.

Solidifying its position as a global provider, Intellicus launched its latest offering, Intellicus 7.1, with support for more than 30 international languages, becoming the only company to provide such a large basket for localization. Some of these languages are Brazilian, Chinese, Czech, Danish, Dutch, French, German, Indonesian, Italian, Portuguese, Russian, Spanish, Thai, Turkish, and Vietnamese.

Intellicus' aim is to extend the reach of its Enterprise Reporting & BI solution to the corners of the globe, while providing exceptional training, support and implementation services for its clients. Their innovation strategy is customer focused. As their clients prepare to get "World Ready" and penetrate their businesses in the corners of the world they need to adopt the linguistic culture of a geography. For performance efficiency it is important that the BI and Reporting software runs in the preferred native language of a geography. With this, Intellicus is eliminating the need of having in-house globalization expertise or development resources.

"Intellicus aspires to be the one of the most accepted analytics solution that banishes the language barrier in the business world. It's great to see our goals become reality. Our success only increases our humility to keep expanding our acceptance," said Rajesh Murthy, VP – Eng. of Intellicus.

About Intellicus: Intellicus is one of the world's leading Business Intelligence and Analytics platforms. More than 60% of Fortune 500 companies are using Intellicus to build powerful reports and dashboards with ease. Our interactive web and mobile platforms give users the power to access, view, and interact with corporate data anywhere. With over 50,000 installations worldwide, we are assisting organizations across verticals to make better informed decisions.
