

### **Intellicus Recognized as one of the Most Popular Embedded BI Solution for SIEM Industry**

**Washington, 17<sup>th</sup> October, 2017:** Intellicus has been recognized as one of the most popular embedded BI solution for the Security Information and Event Management (SIEM) industry at Protect 2017, a signature event for the SIEM industry, organized by Micro Focus,

Intellicus exhibited at Protect 2017 and received great reviews for its high-speed reporting capabilities. Intellicus is a part of ArcSight-Logger, a comprehensive threat detection, analysis, and compliance management SIEM solution, and is used for reporting, alerting, and analyzing all types of enterprise machine data.

Intellicus adds value to SIEM by bringing in data mining capabilities that can generate meaningful insights for all the stakeholders. It seamlessly integrates with different SIEM tools to collate and analyze data across IT.

With Built-in OLAP, Intellicus can process multi-billion rows of data in seconds. Intellicus' Security360™ is a combination of User 360, Server 360, and Application 360 dashboards that give you interactive visualizations on user, server or application data. You can do multi-dimensional analytics on all of your log data and get a panoramic view of all the dimensions. You can further drill down and slice & dice the data to create audit reports as needed.

Intellicus provides reporting and analytics on user access, activities and transactions across the enterprise. From identifying top infected systems, to tracking all denied connections, Intellicus can be used to generate reports on multiple scenarios.
